

GRAPH BASIC

Path, Cycle

Path

- $A \rightarrow C \rightarrow D \rightarrow E \rightarrow B$
- $A \rightarrow B$
- $A \rightarrow C \rightarrow B$
- $A \rightarrow C \rightarrow E \rightarrow B$

Cycle

- $A \rightarrow C \rightarrow B \rightarrow A$
- $A \rightarrow C \rightarrow E \rightarrow B \rightarrow A$
- $A \rightarrow C \rightarrow D \rightarrow E \rightarrow B \rightarrow A$

Directed, Undirected Graph

- A *graph* is a non-empty finite set V of elements called *vertices* together with a possibly empty set E of pairs of vertices called *edges*.

Undirected Graph
Bidirection Graph

directed Graph

Representation of graph

1.

$$G = (V, E)$$

$$V = \{v_1, v_2, v_3, v_4, v_5\}$$

$$E = \{e_1, e_2, e_3, e_4, e_5, e_6, e_7, e_8\}$$

$$= \{(v_1, v_2), (v_1, v_3), (v_1, v_4), (v_2, v_3), \\ (v_2, v_5), (v_3, v_4), (v_3, v_5), (v_4, v_5)\}$$

2. Multiple Edges

$$G = (V, E),$$

$$V = \{1, 2, 3, 4\}$$

$$E = \{(1, 2), (1, 3), (1, 4), (2, 3), (2, 3), (3, 4), (3, 4), (3, 4)\}$$

Representation of graph(unweighted)

$V = \{1, 2, 3, 4, 5, 6\}$

$E = \{(1,2), (1,5), (2,5), (2,3), (3,4), (2,4), (4,5), (4,6)\}$

Exercise 1

Minimum Sum

- $n \times n$ numbers are given. ($1 \leq n \leq 10$)
- Select one number in each row and one in each column that does not overlap.
- (i.e., we will take a total of n numbers, and each number is a value of less than 100).
- Find the minimum sum when you find the sum of n
- Input
 - n is entered in the first line. N integers are entered from the next line to the $n+1$ line.
- Output
 - Print out the minimum sum obtained.
- | Input | Output |
|-------|--------|
| 3 | 7 |
| 1 5 3 | |
| 2 4 7 | |
| 5 3 5 | |

Exercise 2

On the way to meet the boyfriend

- Shalala wants to go to university A to meet her boyfriend. The number of vertex including departure and arrival is n . And the number of Edges linking the vertex is m . If Shalala's location is vertex1, and A University is vertex n , write a program that asks for the minimum cost of Shalala's visit to her boyfriend. ($n \leq 10$, $m \leq 30$)
- And the cost of going from one vertex to another vertex is an integer of not more than 200 and if there is a way from one vertex to another, the same method and cost can be reversed.

Exercise 2

On the way to meet the boyfriend

- The following graph shows an example (there may be multiple edges to Vertex a \rightarrow Vertex b, There may be an edge going back to the same vertex.

- Minimum Cost Path: $1 \rightarrow 3 \rightarrow 5 \rightarrow 7$,
- Minimum Cost: $69 + 59 + 21 = 149$

Exercise 2

On the way to meet the boyfriend

- Input
 - In the first line, the number of vertices n and the number of edges m are entered, separated by spaces. The two vertices are numbered and weighted over the following line to m .
- Output
 - print out the minimum cost of getting to the university. If not, print out "-1".

| Input | Output |
|---------|--------|
| 7 11 | 149 |
| 1 2 47 | |
| 1 3 69 | |
| 2 4 57 | |
| 2 5 124 | |
| 3 4 37 | |
| 3 5 59 | |
| 3 6 86 | |
| 4 6 27 | |
| 4 7 94 | |
| 5 7 21 | |
| 6 7 40 | |
